

FLWEMS Paramedic Procedural Information For:

PROCEDURE INDEX

General

This index outlines the specific procedural steps for performing basic and advance level skills (procedures) practiced by paramedics assigned to the General Leonard Wood Army Community Hospital – Ambulance Section and Chemical Defense Training Facility. This index applies to those patient care skills provided in the “out-of-hospital” setting specifically.

At all times, paramedics must assure patient safety is being maintained. Deviation from these procedure guidelines due to specific patient care needs may be done only after consulting directly with the GLWACH Emergency Department Medical Control. Any deviation from these prescribed procedures shall be documented.

When possible, paramedics should always consult with Medical Control prior to performing any evasive skill(s) outlined in these Out-of-Hospital Patient Care Standing Orders, Protocols, Medications & Procedures. In the event that Medical Control cannot be contacted after reasonable attempts, then paramedics should treat the ill/injured following these guidelines in order preserve life, limb and/or eye sight.
